## Pesticide Analysis Automate Your SPE Clean-Up Steps

Dear Sir or Madam,

Are you concerned with the analysis of pesticides?

Our laboratory device AcceCLEAN is suitable for the automation of several necessary SPE clean-ups in this field. Maybe the AcceCLEAN can also be a good possibility for you to automate major parts of this analysis - and maybe at a price which is lower than you might think.

Using the AcceCLEAN the **pesticides are separated from the sample matrix via solid phase extraction:**

- Acidic pesticides according to E-DIN 38407-35
- Organochlorine pesticides and PCB from serum
- Pesticides from animal oils
- Atrazine in maize
- Atrazine from vegetable oil
- ...

The AcceCLEAN handles the samples fully automatically over SPE cartridges, three samples in parallel, up to 30 in one run

Result: Pesticides in solvent, ready for analysis

**Do you wish to gather more information?** Please simply contact me.

All the best,

Rita Rott, Marketing

**P.S. We develop SPE applications in close contact with our costumers.  
Are you looking for the right automation concept for your clean-up? Please ask us!**
