Products of LCTech

Solutions for Your Laboratory

LCTech offers a broad product range around sample preparation.

It is our goal to facilitate your daily routine in the laboratory with our high quality semi- and fully-automated systems and devices as well as with the useful and cost effective consumables.

Your Specialist for Automated Sample Clean-Up

Solutions by LCTech that facilitate your laboratory work.

The FREESTYLE Robotic System

Automated sample preparation

The FREESTYLE system is the most adaptable robotic equipment for sample preparation currently available on the market. With this almost universally applicable system range, numerous processing steps can be elegantly automated. For example, in the areas of food, animal feed and environmental analysis conducted in pharmaceutical or forensic laboratories or other fields of application.

Dioxin- and PCB-Analysis

Sample preparation for the dioxin and PCB analysis

One of the most elaborate and time-consuming process steps within dioxin and PCB analysis can be automated using our dioxin-systems. Easy-to-use and at the same time reliable automation makes your work in the laboratory much simpler.

Mycotoxin Analysis

Immunoaffinity- and clean-up columns

LCTech offers fast and efficient sample clean-up for multi and single mycotoxin determination with different column formats from 3 mL to the special SMART format. Besides we offers more clean-up columns, such as filled and unfilled glass columns or the Florisil ready-to-use columns Elufix for the H53 method.

GPC uno, GPC quattro

Systems for gel permeation chromatography (GPC)

The GPC uno and the GPC quattro are simple and universal systems for gel permeation chromatography for the clean-up of food and feed samples as well as environmental samples. Due to their modular structure, the systems remain flexible and can be custom-tailored to your laboratory needs.
