

LCTech becomes a Product Line within the GERSTEL Brand

As part of the ongoing strategic development within the Velaris group, LCTech will be more closely integrated into the GERSTEL brand. The goal of this integration is to combine the strengths of both organizations in automated sample preparation, solid phase extraction (SPE) technologies, and laboratory automation, enabling customers to benefit from more comprehensive solutions across the entire analytical workflow.

LCTech has long-standing expertise in developing advanced sample preparation and SPE technologies used in laboratories worldwide across environmental, food, pharmaceutical, and research applications. Through this integration, these technologies will be positioned as the LCTech product line within the GERSTEL portfolio.

Continuity for customers and partners

The transition is designed to be seamless and stable for customers and partners:

- LCTech GmbH will remain the legal entity
- The existing product portfolio remains unchanged
- Contacts, service, and support remain the same
- Ordering processes and business relationships remain unchanged

Marketing and communication materials will gradually transition to GERSTEL branding, while the established technologies will continue to be offered as the LCTech product line.

More integrated solutions for modern laboratory workflows

By bringing both organizations closer together, the strengths of each company can be combined more effectively. The integration of LCTech's sample preparation and SPE technologies with GERSTEL's expertise in laboratory automation and analytical instrumentation will enable even more integrated workflow solutions for modern laboratories.

The objective is to further support laboratories worldwide in increasing efficiency, automation, and standardization of analytical processes.
